Styling

Opsloom makes it easy to style your assistants to suit you or your company's needs. To customize an account's style, submit a [palette](#) object in the body of the [/account](#) POST request. [palette](#) allows you to define custom CSS properties for a given account in both light and dark mode. You can find details on available properties in the table below.

Property	Values Accepted	Default Value
background	HSL	53 100% 95%
foreground	HSL	53 5% 10%
card	HSL	53 50% 90%
